

METHOD OF APPLYING FRENCH MANICURE AND AIRBRUSH DESIGNS USING A PRESSURIZED SPRAY BOTTLE

A new technique created for the application of the French manicure and airbrush process. It is simplified in such a way that allows for easy usage by an amateur and nail care specialist.

BACKGROUND OF THE INVENTION

A nail care specialist using an airbrush machine usually applies the French manicure process in the salon. A trained specialist can apply the white airbrush paint to a professional finish using paper stencils to form the French manicure or airbrush designs.

The airbrush machine that is used is not very portable. The paint is most commonly dispensed by stepping on a pedal to make the pressure needed to create the airbrush result.

The fact that the airbrush machine is not very portable can sometime be a challenge to the nail care specialist, who often finds it difficult maneuvering the machine and the client in the salon.

The French manicure can also be applied using the white color nail polish. This again can also be a tedious and manual task. It usually requires a trained and (or) steady hand. The application result ending is most normally not neat or is unable to achieve the result of the airbrush finish.

BRIEF SUMMARY OF THE INVENTION

The invented method will enable users such as trained nail care specialist and untrained individuals to accomplish the same French manicure airbrush finish. The object used for the application is a previous invention (the pressurized spray can). The white airbrush paint will be dispensed from the pressurized spray can and applied using paper stencils to form the French manicure or airbrush designs.

This method of application will enable nail care specialist to maneuver more easily in the workplace. It will also allow for amateurs to apply or freshen up their own French manicure or airbrush designs at home, with a more salon-finished look and more ease.

BRIEF DESCRIPTION OF THE DRAWING

FIG. 1 is a view illustrating the pressurized French nail spray bottle to be used for the application of the nails designs;

FIG. 2 examples of paper stencil designs to accompany the spray bottle

FIG. 3 demonstrates how the actual application is done
